DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/24/05 has been entered.

Response to Amendment

Amendment filed 5/2/05 After Final Rejection mailed 2/7/05 has been entered following said Request for Continued Examination. In said Amendment Applicant cancelled 1, 2 and 4 and newly added claims 7-10. Claims 3 and 7-10 are in the application. Comments on Remarks in said Amendment are included below under "Response to Arguments".

Information Disclosure Statement

The examiner has considered the items listed on the Information Disclosure Statements filed January 31, 20-05 and May 12, 2005. Signed copies of the corresponding Forms PTO-1449 are herewith enclosed.

Response to Arguments

2. Applicant's arguments filed 5/2/05 have been fully considered but they are not persuasive. In view of the substantial amendment of the entire claim language a new search was necessitated as the art rejection based on Reeh et al has been successfully

Art Unit: 2826

overcome: Reeh et al does not teach both a transparent resin and an outer surface of said transparent sealing resin with a dye, as two separately identifiable elements need to be in the prior art. However, this is found to be the case in Komoto et al (6,340,824 B1). In this regard it is noted that a phosphor particle qualifies as dye because said phosphor particle introduces a color otherwise absent.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. The term "blueish" in claim 9 is a relative term which renders the claim indefinite. The term "blueish" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.
- 5. The term "yellowish" in claim 9 is a relative term which renders the claim indefinite. The term "yellowish" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.
- 6. The term "reddish" in claim 9 is a relative term which renders the claim indefinite. The term "reddish" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Application/Control Number: 10/648,224 Page 4

Art Unit: 2826

7. The term "greenish" in claim 9 is a relative term which renders the claim indefinite. The term "greenish" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 3 and 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Komoto et al (6,340,824 B1) in view of prior art as admitted by Applicant (APAA). First addressing the independent claim 7: Komoto et al teach a chromaticity-corrected LED device (see "Summary of the Invention" and Figure 32B) comprising: an LED mounted on a substrate 52 (col. 16, l. 35); transparent resin 540 (Figure 32B and col. 26, l. 22-31) sealing the LED, the transparent resin including "fluorescent material" distributed therein for changing a chromaticity of light emitted from the LED to a desired chromaticity based on an expected chromaticity of the light emitting from the LED (the limitation "for forming." recited here conveys the purpose indeed also of the prior art, the purpose being to change the wavelength distribution and thus the chromaticity, but is without patentable weight, constituting functional language); and an outer surface 540A (col. 26, l. 23) (upper surface region of said resin having an increased

concentration of phosphor particles) of the transparent sealing resin comprising a dye (the examiner's position is that a phosphor is a dye because given incident light the phosphor changes said light into a different color, thus coloring (=dyeing) the substrate). The final limitation "based upon a measurement of chromaticity of the light emitted from the LED" is without patentable weight in the present device application (as opposed to a method application) because the final structure is not further limited by said limitation. Komoto et al do not necessarily teach said fluorescent material to be phosphor particles. However, Komoto et al recites said fluorescent material as "fluorescent material or any other appropriate material having a wavelength converting function (see Abstract), while Applicant admits as prior art on page 1 of the Specification the selection of phosphor particles for said wavelength converting function (lines 19-21). Applicant is reminded that Applicant is reminded in this regard that it has been held that mere selection of known materials generally understood to be suitable to make a device, the selection of the particular material being on the basis of suitability for the intended use, would be entirely obvious. In re Leshin 125 USPQ 416.

Page 5

On claim 3: the dye (of phosphor particles) necessarily has a complementary color to the chromaticity of the light emitted from the LED because said dye in said LED changes the color of the emitted light so as to produce light that, in conjunction with the original light of the light-emitting element in the LED produces white light (see "Summary of the Invention", col. 3, I. 23-28)...

On claim 8: the LED device is for producing white light (see "Summary of the Invention", col. 3, I. 23-28).

On claim 9: as the emitted light is white light the LED emits the basic components of said white light, which are blueish light, yellowish light, reddish light or greenish light: white light has red, blue and green as basic components from which it can be built, which are included in the components of the light output due to the dye (see "Summary of the Invention"). To this extent, and with reference to the indefinite mature of the claim as noted above, said white light is all of the above.

On claim 10: because the dye (phosphor) changes the light of the LED into white light the color of the light emitted by said dye (phosphor) necessarily complements the light emitted by the LED.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Tasaki et al (6,319,425 B1) (see IDS filed January 31, 2005).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Johannes P. Mondt whose telephone number is 571-272-1919. The examiner can normally be reached on 8:00 - 18:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan J. Flynn can be reached on 571-272-1915. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
